

Sustainable Urban Development – the Swedish experience

FIRST IDEA PROJECT EVALUATION

SECOND OPINION PROJECT REVALUATION

CRASH COURSE

LEARNING VISITS

Sustainability issues have been a natural part of urban development in Sweden for a long time. Not only when it comes to new technology but also in areas such as urban governance, urban strategies, urban resource management and urban planning & design. To make this experience available for a larger international population the non-profit organisation Sustainable Business Hub has gathered Swedish companies, city planners and universities to work out more holistic service offers in the area of sustainable urban development.

The sustainable urban development team at Sustainable Business Hub consists of both companies and organisations. Together our team members possess more than hundred years of experience in the area and have access to a large number of experienced individuals. Our offers are mainly focused on public organisations such as cities, municipalities or governments, but are also applicable for large developers.

Sustainable Business Hub

Sustainable Business Hub (SBH) is a non-profit organisation, aiming to help companies whose products or services have a particularly high environmental profile. We create networks between businesses and organisations in order to successfully market sustainable products and ideas and are a key player in environmental business development in southern Sweden.

We collaborate with businesses, universities and institutes, utilities, municipalities, embassies and the Swedish Trade Council. The companies Sustainable Business Hub supports sell products, systems, solutions, services and know-how and are mainly focused in the following fields:

- Energy & CO2-reduction
- Waste management
- Sustainable building & urban development
- Water treatment
- Air quality control
- Energy efficient transportation
- Communication for sustainability

For customers worldwide we offer contacts to companies in the Cleantech Industry in southern Sweden who can solve your problem. We arrange qualified technical visits to selected world class reference installations. For best results we integrate our contacts in our network of universities and institutes, utilities and municipalities. Within Sustainable Business Hub and our network, we have a detailed knowledge of the Cleantech-market in Sweden which we will be happy to share with you. We also arrange technical seminars and match-making activities in Sweden as well as abroad where we bring relevant suppliers.

Our offers

First idea- project evaluation

A selected team goes through your upcoming plans or strategies and gives input on “the Swedish proposed approach”.

Second opinion- project revaluation

A selected team goes through your existing plans or strategies and gives a “second opinion”.

The Swedish experience – a crash course

We visit you for a 1-2 day crash course on how we work with sustainable city development in Sweden, with examples, strategies, work models and lessons learnt.

Learning visits

You visit us in Sweden for a 1-2 day crash course on how we work with sustainable city development and see the sites and meet the people responsible for the results.

Wanting more?

Of course the team is ready to take on assignments, individually or as a group, according to your needs, from small and short term, to large and long term projects.

We provide the Swedish experience that will help you create higher value and increased environmental performance to (in) your project!

Do you want to know more about Swedish experiences of Sustainable Urban Development? Do not hesitate to contact us.
